

SUPER SUPPLEMENTAL VITAMINS & MINERALS

Product No: 1817 Quantity: 120 tablets

Super Supplemental Vitamins and Minerals provides a comprehensive array of 35 vitamins and minerals to bridge the nutritional gaps in your diet. Super Supplemental provides 100% of the recommended daily requirements of most vitamins and a full complement of minerals.

All ingredients that go into this product are first quarantined and checked by Quality Control when their identity and purity is confirmed by the Lab. They are then released for production.

All ingredients are carefully weighed by one qualified technician and checked by his weigh master. After all ingredients are combined the total weight of the batch is checked again to verify the accuracy of the weights of the components.

The ingredients are then screened and blended for uniform distribution. The weighing, screening and blending processes are very important to the successful tableting of this product because it is specially formulated so proper amounts of herbs are used, not only to complement the vitamins and minerals but also to serve as tableting aids.

The delicate balance has to be maintained in order for the dual purposes of the herbs in the formula to work.

The properly blended powder is then fed into the high speed tableting machine that can make half a million tablets a day and every tablet has exactly the same degree of potency.

The weight, the thickness and the hardness of the tablets are checked every fifteen minutes during tableting to ensure uniformity.

Compressed tablets are put in the coating pan and sprayed with a thin but even layer of zein solution, the protein matter from corn, to lock in freshness and to lock out moisture and air. The zein coatings have to be thick enough to preserve potency and freshness of the tablets but thin enough so it would not impede the rate of tablet disintegration.

Samples of coated tablets are then send to quality control for clearance. The Lab analysts include tablet identity, appearance, thickness, hardness, disintegration time, potency, weight variation, dissolution rate and uniformity. Only if the tablets meet these rigid specifications will they be released for packaging.

And finally, there is a fully automatic packaging machine that does filling, cottoning, capping and labelling so that the tablets are untouched by human hands.

This is an indication of the high standard that is applied in order to ensure the protection of the essential active element in all the ingredients of Super Supplemental Vitamins and Minerals

This same degree of care is applied to the production of every one of Nature's Sunshine Products to ensure their highest possible quality.

Note: This product is not recommended for very young children. Or for mothers who are or are about to become pregnant, who should instead use Multiple Vitamins & Minerals Product No: 4703.
